The Honorable Hakeem Jeffries
House Minority Leader
Washington, DC 20510

RE: Requesting Extension of the Acute Hospital Care at Home Waiver

Dear Speaker Johnson and Leader Jeffries,

The undersigned stakeholders, representing Hospital-at-Home (HaH) programs, physicians, physician assistants, pharmacists, nurses, emergency medical technicians, paramedics, patient advocacy organizations, hospitals, health systems, and care model enablers, are writing to **ask for at least a 5-year extension of the [Acute Hospital Care at Home waiver program](#)** (AHCaH) before its expiration at the end of 2024. Without an extension, Medicare beneficiaries will lose access to HaH programs that have been demonstrated to provide excellent clinical outcomes and lower the costs of care.

Medicare created the AHCaH waiver at the height of the COVID-19 pandemic as part of a broad strategy to help alleviate hospital capacity issues. Prior to the implementation of the AHCaH waiver, approximately 20 HaH programs existed across the U.S. After the waiver, more than 300 hospitals across 129 health systems in 37 states are operating under the waiver—with no guarantee of payment permanence.^{1,2} That represents approximately 5% of all U.S. hospitals and 15% of academic medical centers. Clinical outcomes of the AHCaH program have been outstanding.^{3,4} At this current trajectory, 1 in 6 hospitals will have HaH by 2030, allowing hospital care to be delivered to more patients in the safety and comfort of their homes nationwide.

Hospital-at-Home has a long history. Over the past 30-plus years, HaH researchers have found through numerous studies that patients and family caregivers prefer HaH, which delivers excellent clinical outcomes, including substantial reductions in adverse events (e.g., mortality), better patient and family experience, lower caregiver stress, better functional outcomes, high provider satisfaction, and lower costs of care.⁵ As a result of these studies, we firmly believe that the AHCaH waiver, which provides appropriate payment for acute hospital-level care delivered at home, is the keystone to the future of home-based care delivery for Medicare patients and beyond.

To achieve this future, the waiver must be extended to enable hospitals and health systems nationwide to continue building out the logistics, supply chain, and workforce for Hospital-at-Home (HaH) and to encourage multiple payers outside the Medicare program, including Medicaid programs, to enter the HaH market. An extension will also allow home-based services to be developed equitably across populations everywhere and ensure hospital inpatient unit care is available for the patients who need it while enabling patients who can and want to be treated in their home to have the opportunity to do so, creating needed capacity for hospitals without increasing health system costs.

In order to avoid any disruption in access to Medicare beneficiaries, we ask that you extend the Medicare **Acute Hospital Care at Home waiver program for at least five years before the end of 2024**. We thank you for the opportunity to provide input on the Hospital-at-Home program and provide our ideas for the future of the program. For more information on the HaH research and testing, please visit [here](#). Should you have any questions, please reach out.
